FENIX DFA
Data From the Ashes

We make sure your backup works before an incident proves it doesn't.

Fenix DFA sits above your existing backup infrastructure, On-Prem or Cloud, and applies behavioral analysis to find gaps before they become incidents, fines or failed audits.

What you don't see is what breaks you.

● BACKUP JOBS: ALL GREEN

Your backup tool reports the jobs it ran.
It says nothing about the job that never ran or the asset that was never covered.

- **Server removed from backup policy**
- **Scheduler suspended and never resumed**
- **Retention silently modified**
- **Restore tests never executed**
- **Unexpected size changes**
- **Repeated failures**

FROM FIRST FAILURE TO FINAL AUDIT EVIDENCE

01 Detection
Failures, gaps and never-restored assets surface automatically.

02 Remediation
Diagnosis, fix and reprocessing tied to the original record.

03 Documentation
Every interaction stored and linked to the incident history.

04 Proof
Audit-ready evidence, retained permanently for the regulator.

WHY THE EVIDENCE HOLDS UP

No gaps
Never-restored assets are flagged before an attack or an auditor finds them.

No self-attestation
Compliance is based on real execution data, not on what someone entered manually.

No log purges
Evidence stays in Fenix DFA, independent of backup tool log retention.

FIVE QUESTIONS AUDITORS ASK

Coverage	Are all critical assets protected by an active policy?
Execution evidence	Did jobs run on time and successfully? A green console is not evidence.
Restore tracking	Were restore tests executed and documented for each asset?
Retention compliance	Is expected retention being met?
Accountability chain	Can everyone identify who owns each risk, from analyst to C-Level?

Fenix DFA answers all five continuously, without touching your backup data.

DORA · NIS2 · GDPR · ISO 27001 · SOX · HIPAA · NYDFS · NERC CIP · FAA · GxP · CRA (EU) · LGPD

What is your backup score?

A Resilience Assessment of one environment returns a maturity score out of 100, your coverage and restore gaps, and a 30/60/90-day plan.

Over 25 backup platforms · Metadata layer only, we never touch your backup data · Deploy in under 30 minutes
